

SOLUTION BRIEF
HYAS Insight

Accelerate Threat Investigations with HYAS Insight and Maltego

The HYAS Insight integration with Maltego empowers security teams to conduct faster, more accurate investigations by embedding HYAS' exclusive infrastructure intelligence into Maltego's powerful graphical analysis environment. This synergy enables analysts to uncover hidden connections, pivot across datasets, and map adversary infrastructure with unmatched precision — accelerating threat attribution and response efforts.

Key Benefits

Deeper Insights

Enrich investigations with exclusive, historical, and real-time infrastructure intelligence from HYAS Insight.

Enhanced Efficiency

Perform pivots and link analysis directly in Maltego, reducing investigation time and effort.

Stronger Attribution

Connect specific threat instances to adversary infrastructure, uncovering relationships often invisible with conventional data sources.

Broad Visibility

Merge HYAS data with other Maltego datasets and OSINT sources to broaden investigative reach.

Seamless Workflow

Integration through Maltego's Transform Hub enables quick setup and fast time to value.

Key Features

Domain Enrichment Transforms

Investigate domain names and deliver enriched entities for follow-on analysis.

Pivoting Capabilities

Infer and map connections between entities to build a detailed view of adversary infrastructure.

Integration with Existing Data

Increase overlap and cross-reference findings with Maltego's extensive datasets and other OSINT sources.

Real-Time and Historical Data

Access to deep datasets that provide context beyond the surface.

How It Works

HYAS Insight's powerful infrastructure intelligence dataset is accessed through custom Transforms within Maltego. Investigators can query domains, IPs, and related infrastructure, pivoting off entities to map adversary relationships and uncover hidden threats in real time.

Use Cases

Threat Hunting

Rapidly identify and map adversary infrastructure by pivoting on domains and IPs.

Incident Response

Speed up investigations by enriching incidents with high-fidelity infrastructure intelligence.

Fraud Investigations

Correlate malicious activity across entities to expose fraud networks.

Adversary Attribution

Connect attack campaigns to threat actors by revealing hidden infrastructure links.

Deployment / Getting Started

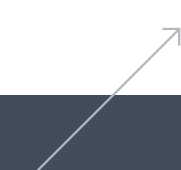

1. Access Maltego's Transform Hub and locate the HYAS Insight Transforms.
2. Obtain an API key from HYAS.
3. Install the Transforms within Maltego.
4. Begin investigations by running HYAS Insight queries in the Maltego interface.

About HYAS

HYAS is the world's premier provider of infrastructure intelligence, enabling organizations worldwide with unparalleled visibility, protection, and the necessary proactive intelligence to address cyber attacks, fraud, and all forms of digital risk. With real-time visibility into adversary infrastructure and their related devices, HYAS Insight allows security teams to track, monitor, and dismantle cyber threats and fraud with unmatched speed and precision.

HYAS Products

HYAS security solutions provide the visibility and observability needed to stay in control of your environment. HYAS solutions are easy to deploy, easy to manage, and integrate seamlessly into any security stack.

PROTECTIVE DNS

HYAS Protect

Protective DNS

Our protective DNS solution combines authoritative knowledge of attacker infrastructure and domain-based intelligence to proactively block malicious communication used by cybercriminals to conduct phishing, ransomware, and other forms of cyberattacks.

Protecting Businesses and Solving Intelligence Problems Through Detection of Adversary Infrastructure and Anomalous Communication Patterns

HYAS is a world-leading authority on cyber adversary infrastructure and communication to that infrastructure. HYAS is dedicated to protecting organizations and solving intelligence problems through detection of adversary infrastructure and anomalous communication patterns.

We help businesses see more, do more, and understand more in real time about the nature of the threats they face. HYAS turns meta-data into actionable threat intelligence, actual adversary visibility, and protective DNS that renders malware inoperable.
